

Olawinger turns an inside out. It captures a familiar yet mysterious, alluring and often unattainable interior volume that a bee seeks for refuge. It offers a simple and obvious solution to feral bee housing in an uncanny urban object. Passers-by may interact with an overt, amorphous shell that presents a form only creatures of the wood are privy to. On the inside, grotesque contours set against a holey wooden block define a stark resemblance to the insect's typical lair.

Potential installation scenario.

Disruptive patterning extracted from form.
